

1. Set up a VPC Transit Gateway.

- ➔ Created a Transit Gateway in the AWS Region.
- ➔ Created a Transit Gateway attachment for the VPC's.
- ➔ Selected the required subnets for the Transit Gateway attachment.
- ➔ Associated the VPC attachment with the Transit Gateway route table.
- ➔ Added routes in the VPC route tables pointing to the Transit Gateway.
- ➔ Verified the Transit Gateway attachment and routing configuration.

```

[ec2-user@ip-102-168-0-168 ~]$ ssh -i test.pem ec2-user@44-201-165-207
Warning: Permanently added '44-201-165-207' (44-201-165-207) to the list of known hosts.

2. Set up a VPC Endpoint.

- ➔ Created a VPC Endpoint for the required AWS service(s3).
- ➔ Selected the VPC where the endpoint was required.
- ➔ Selected the appropriate endpoint type (VPC) and service (s3).
- ➔ Associated the endpoint with the required route table/subnets.
- ➔ Configured the required security group and endpoint policies.
- ➔ Verified the endpoint status and tested connectivity to the AWS service
