

Challenges:

1. Launch one aws ec2 and install jenkins.
 - Launched one instance and Installed Jenkins.
 - . Installed Java 21.
 - 3. Installed Jenkins.
 - 4. Started Jenkins using systemctl.
 - 5. Verified the Jenkins service status successfully

2. Setup Apache Tomcat on Ubuntu Virtual Machine

Objective:

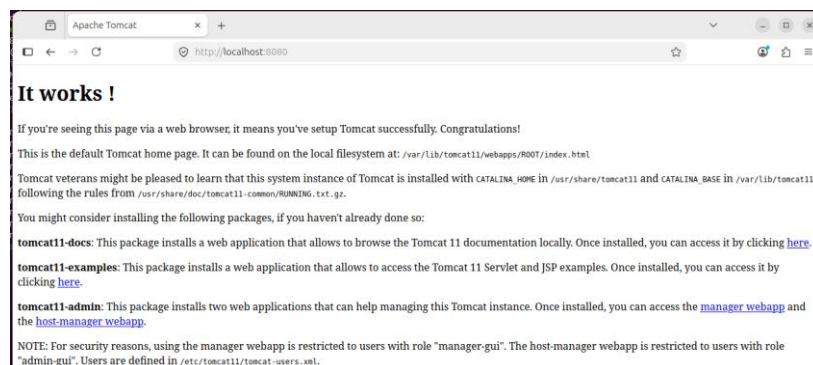

Set up and run Apache Tomcat on an Ubuntu Virtual Machine.

Implementation:

1. Checked Tomcat service status: `sudo systemctl status tomcat`
2. Verified Tomcat is active (running).
3. Verified Tomcat is listening on port 8080.
4. Verified the server startup successfully through the service logs.

[illegible][illegible]

- Completed Installing tomcat

3. Setup Docker Desktop on your local windows.
 1. Downloaded and installed Docker Desktop.
 2. Enabled the required Windows virtualization features.
 3. Started Docker Desktop successfully.
 4. Verified the installation: `docker --version`

```
MINGW64:/c/Users/pooji/OneDrive/Desktop
pooji@PoojiTH MINGW64 ~/OneDrive/Desktop
$ Docker --version
Docker version 29.6.2, build dfc4efb
pooji@PoojiTH MINGW64 ~/OneDrive/Desktop
$
```
